PEACOC® 360
Spooling Patch Panel
Quick Installation Guide

This guide covers instructions for:

• Rack Installation
• MPO Cable Pay-out Operation
• PEACOC 360 Rear MPO Cable management and setup

A — RACK INSTALLATION

1 Put 1 screw on each side of the Rack plate

2 Take the Patch Panel to the rack and place Panel's mounting bracket above the screws

3 Put 1 additional screw on each side of the mounting Bracket then tighten to secure in place

B — MPO JUMPER CABLE PAY-OUT OPERATION

1 Take off the rear Panel cover

2 From the rear side, select the desired cassette

3 Grasp the pull tab of the MPO adapter holder and pull downward to remove it.

1 Push the rear lock sideway then pull out the spool cassette half way until the rear lock re-engage.

2 Take the outer-end of MPO jumper and pay-out the cable up the desired length

C — PEACOC 360 REAR MPO CABLE MANAGEMENT AND SETUP

1 Take out the inner end MPO cable from the top of the spool

2 Route the Inner end MPO Cable from the top of the spool going out of the spool cassette

3 Rotate the spool to align the arrows labelled on the top of the spool and cassette

4 Push the lock until an audible sound "clicks" to hold the spool and cable in place

5 Partially insert the cassette back into the chassis

6 Retrieve the MPO adapter holder with the connected fan-out and the inner end of the MPO jumper.

7 Connect the MPO to the Adapter, then reattach the MPO adapter holder to the rear of the spool cassette

8 Secure the MPO cable on the rear cable hanger for organized cable management.

9 Repeat the process for the remaining cassette. Once completed, reattach the rear cover to the chassis.
